

## INFORMATION MATERIAL

### 1. atomondo Hub

The atomondo Hub has been established as a central virtual venue, which is made available online to the nuclear community to enable both regional and international exchange, with the aim of linking various areas of the industry with each other and thus allowing simple targeted networking of Hub users.

For this purpose, an appealing virtual environment was created, in which users can navigate intuitively. Participating companies and institutions can present their innovations in the integrated and freely accessible company exhibition throughout the year and make contact with visitors, potential customers and future partners.

The Hub regularly hosts industry-relevant events that present latest R&D findings to the nuclear community, from current market developments, project management insights, methods and processes, to cutting-edge technology and the important area of digitalization.

Furthermore, an Academy Campus is currently being built on the Hub to address the industry's weighty skills shortage issue. Here, the Hub's operator, actimondo eG, is working closely with universities and industry. In the medium term, this should drastically increase the number of qualified university graduates and attract a large number of lateral entrants. The training courses range from basic teaching to onboarding courses and special training courses.

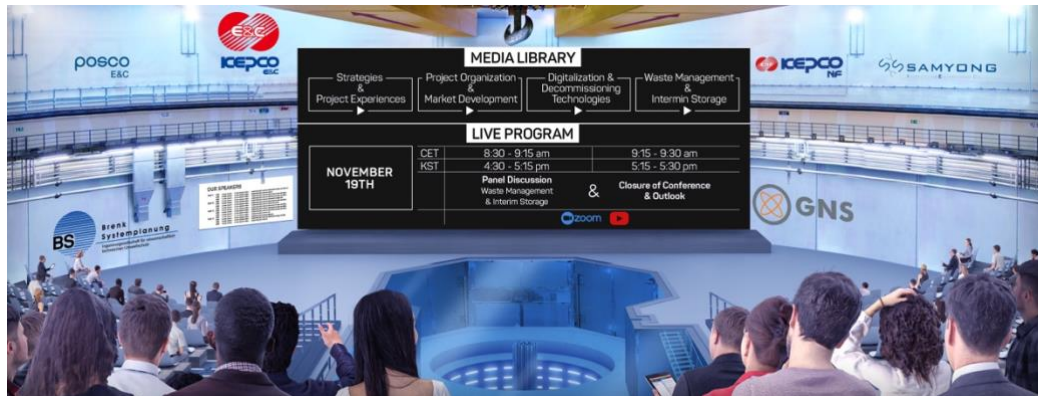

The atomondo Hub enables participating companies to be directly visible to the international nuclear community with their innovative solutions for products and services, thus increasing their chances for new customer relationships and partnerships nationally as well as internationally. Companies can also use the Hub to book an attractive digital venue for in-house or customer events, and to either participate in existing training courses or offer their own employee or onboarding courses.

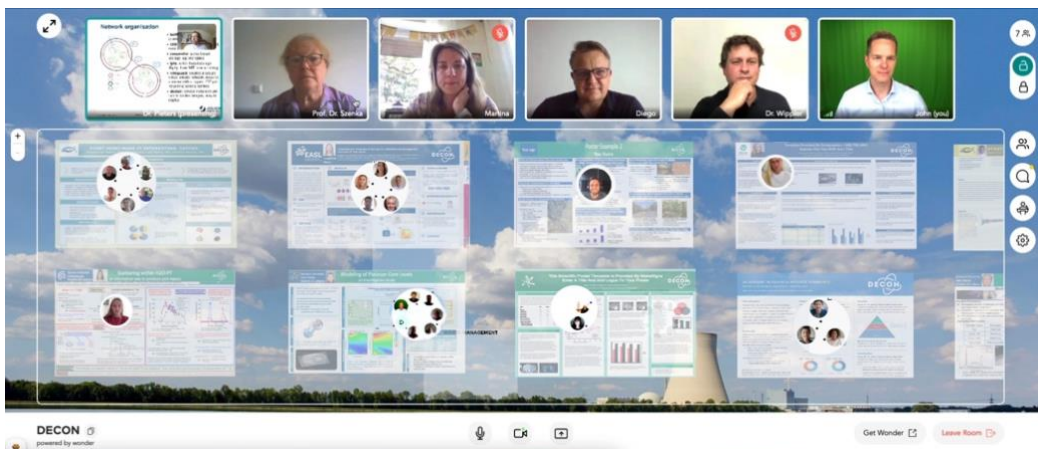

The atomondo Hub is continuously being developed and expanded, with innovative and modern solutions being built in and the challenges of the industry being specifically addressed.

## 2. The DECON conference and other events on the Hub

DECON is the annual conference on nuclear decommissioning and waste management organized by the hub operator, actimondo eG, and its partners. The extensive international network of the DECON organizers guarantees to provide exactly the right experts for the current topics of interest. These experts and company representatives will present their solutions and technological developments. Professionals will discuss their experiences together with participants.

DECON is not comparable with conventional online events. Like no other, it offers an attractive design, high-quality content, intuitive usability, interactive elements and innovative, entertaining solutions for communication and networking between participants and contributing companies.

In addition to DECON, events of other organizers will take place on the atomondo Hub, of which one of those will be the DIGI-DECOM on October 18<sup>th</sup> – 20<sup>th</sup> 2022. It is focused on digital and technological innovations for the nuclear decommissioning market.

As a sponsor of the atomondo hub, you can contribute to the hub itself, including all events held hereon, or you can support a special event of your interest. Further, you can book a booth in the exhibition area of the hub, allowing you to be visible for a whole year on the main spot for the global nuclear community, get in touch as well as link to your website, and present your innovations, products and services.
